INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2004/008574

Box No. I Basis of the report

1. With regard to the **language**, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
 - This report is based on translations from the original language into the following language , which is the language of a translation furnished for the purposes of:
 - international search (under Rules 12.3 and 23.1(b))
 - publication of the international application (under Rule 12.4)
 - international preliminary examination (under Rules 55.2 and/or 55.3)
2. With regard to the **elements*** of the international application, this report is based on (*replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report*):

Description, Pages

2-9	as originally filed
1, 1a	received on 27.04.2005 with letter of 26.04.2005

Claims, Numbers

1-11	received on 27.04.2005 with letter of 26.04.2005
------	--

Drawings, Sheets

1/2, 2/2	as originally filed
----------	---------------------

- a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing

3. The amendments have resulted in the cancellation of:
 - the description, pages
 - the claims, Nos.
 - the drawings, sheets/figs
 - the sequence listing (*specify*):
 - any table(s) related to sequence listing (*specify*):
4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).
 - the description, pages
 - the claims, Nos.
 - the drawings, sheets/figs
 - the sequence listing (*specify*):
 - any table(s) related to sequence listing (*specify*):

* If item 4 applies, some or all of these sheets may be marked "superseded."

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/EP2004/008574

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes:	Claims	1-11
	No:	Claims	
Inventive step (IS)	Yes:	Claims	1-11
	No:	Claims	
Industrial applicability (IA)	Yes:	Claims	1-11
	No:	Claims	

2. Citations and explanations (Rule 70.7):

see separate sheet

Reasoned statement under Rule 43bis.1(a)(i)

1. It is considered that independent **claims 1 (method) and 9 (system) relate to new and inventive subject-matter (Articles 33(2) and (3) PCT)**, since the prior art does not disclose or suggest the specifically claimed transparent access authentication of subscribers.

1.1 The following document

D1: "Access security for IP-based services (Release 5)" 3GPP TS 33.203 V5.6.0, June 2003 (2003-06), pages 1-27,34, XP002264085 (acknowledged in the description),

is regarded as being the closest prior art and discloses a method for access authentication of subscribers (Authentication of an IM-subscriber; paragraph 6.1.1) connected to an authenticating network domain by a GPRS core network or an UMTS network (PS-Domain in figure 1; also figure 3), wherein the method using data which are assembled by a network layer during establishment of a PDP context in GPRS networks (IP address established during establishment of a primary PDP context is used for all further communication; this feature is disclosed implicit in document D1).

1.2 The problem with this prior art is that no authentication on application layer is foreseen in GPRS standard. Thus there is the need to provide a transparent access authentication of subscribers without requiring extensions on network or client side (description, page 1, lines 25-29 and page 2, lines 15-16).

1.3 The application solves this problem by providing the method with following steps:

- when a Gateway GPRS Support Node (1) receives a context creation request it queries a registration server (2) to get an IP address assigned for the particular PDP context, and within the context the registration server (2) receives a Mobile Station ISDN Number, MSISDN, and/or an International Mobile Subscriber Identity, IMSI, of the subscriber and stores for each PDP context a pair of IP address and IMSI/MSISDN in a session database (3),

**INTERNATIONAL PRELIMINARY
REPORT ON PATENTABILITY
(SEPARATE SHEET)**

International application No.

PCT/EP2004/008574

- a proxy server (5) is provided which checks IMSI/MSISDN from a registration server (2) session database (3) and IMSI/MSISDN from a application domain database (4) for match,
- if the IMSI/MSISDN pairs are matching, the proxy server (5) checks a subscribers IP address assigned in the IP network layer for match with the IP address assigned by the registration server (2), and
- the proxy server (5) parses the application layer for IP addresses given in the headers of registration messages and checks for match with the network layer IP address which was already checked for match with the IP address assigned by the registration server (2).

No prior art document anticipates the proposed solution.

- 1.4 Independent **claim 9** contains the corresponding features as the method of claim 1 expressed respectively in terms of the system. The argumentation of the points 1.1-1.3 applies mutatis mutandis also for this claim.
2. **Claims 2-4 and 6-11** are dependent respectively on claims 1 and 9 and therefore also meet the requirements of Art.33(2) and Art.33(3) PCT.

T03018 PCT

1

Transparent Access Authentication in 2G and 2.5G Mobile Access Networks

EPO - DG 1

28. 04. 2005

- 5 The present invention relates to a method and system for transparent access authentication in 2G and 2.5G Mobile Access Networks. This includes communication networks of the GSM-, GPRS- and UMTS-standard well known to skilled persons. (82)
- 10 In standardisation of Universal Mobile Telecommunication System (UMTS Rel.5) comprehensive means are foreseen to perform authentication on the application layer with no need to interwork with the underlying radio and transport networks. The mechanisms are based on the assumption that a specific environment is prepared for deployment of IP Multimedia Subsystem (IMS) services. It includes the use of IMS SIM (ISIM) application, which in turn requires Rel.99UICC's in the connected end devices to handle the authentication and key agreement (AKA).
- 15
- 20 In case of deployment of IMS and IMS based services in a network environment which is characterised by the use of SIM cards, the standardised authentication mechanism will not be applicable.
- 25 The Technical Specification 3GPP TS 33.203: "Access Security for IP-based Services", Release 5, V5.6.0, June 2003, XP-002264085, discloses a method for transparent access authentication of subscribers connected to an authenticating network domain by a GPRS core network or an UMTS network, the method using data which are assembled by a network layer during establishment of a PDP context in GPRS networks.
- 30

T03018 PCT

1a

It is the object of the invention to provide method and system for transparent access authentication which allow it to run authentication transparently to the end device, without requiring proprietary extensions and functions on
5 network or client side.

This object is achieved by providing a method and system as described in the independent claims.

T03018 PCT

10

EPO - DG 1

28.04.2005

26.04.2005

Claims

(82)

1. Method for transparent access authentication of
5 subscribers connected to an authenticating network domain
by a GPRS core network or an UMTS network, wherein the
method using data which are assembled by a network layer
during establishment of a PDP context in GPRS networks,
characterised in
10 that when a Gateway GPRS Support Node (1) receives a
context creation request it queries a registration server
(2) to get an IP address assigned for the particular PDP
context, and within the context the registration server
(2) receives a Mobile Station ISDN Number, MSISDN, and/or
15 an International Mobile Subscriber Identity, IMSI, of the
subscriber and stores for each PDP context a pair of IP
address and IMSI/MSISDN in a session database (3),
that a proxy server (5) is provided which checks
IMSI/MSISDN from a registration server (2) session
20 database (3) and IMSI/MSISDN from a application domain
database (4) for match,
that if the IMSI/MSISDN pairs are matching, the proxy
server (5) checks a subscribers IP address assigned in
the IP network layer for match with the IP address
25 assigned by the registration server (2), and
that the proxy server (5) parses the application layer
for IP addresses given in the headers of registration
messages and checks for match with the network layer IP
address which was already checked for match with the IP
30 address assigned by the radius server (2).

2. Method according to claim 1, comprising the step that
during PDP context establishment a Serving GPRS Support

T03018 PCT

11

Node (SGSN) is authenticating the subscriber using the A3/A8 algorithm based on an end devices SIM card.

3. Method according to any preceding claim, comprising the
5 step that in all subsequent messages arriving at the proxy server (5), it checks for match of IP address in the IP packet overhead field for source address with that in the application layer protocol header fields and verifies the matching pairs against the IP address assigned by the Radius server (2).
- 10
4. Method according to any preceding claim, that a routing module (7) is provided which is a standard entry point for all messages and decides by evaluation of Private ID, PrivID, which network node will handle the message.
- 15
5. System of units in a mobile telecommunication network, characterised that at least a first authentication unit (2) is connected via a data line to a second unit (5; 6) which assembles data according to the method of claim 1.
- 20
6. System according to claim 5, wherein the first unit comprises a registration server (2).
- 25
7. System according to claim 5 or 6, wherein the first unit (2) is connected to a session database (3).
8. System according to any of claims 5 to 7, wherein the second unit comprises a proxy server (5).
- 30
9. System according to any of claims 5 to 8, wherein the second unit comprises a Proxy Call State Control Function (6).

T03018 PCT

12

10. System according to any of claims 5 to 9, wherein the second unit (5; 6) is connected to a subscriber database (4).

5

11. System according to any of claims 5 to 10, wherein a routing module (7) is provided which decides by evaluation of Private ID, PivID, which network node will handle the message.

10
